WHY
PIVOT DOOR?

Hinge doors are easy for people to conceptualize because they're so accustomed to using them. You have two or three hinges on one side of the door, and the door swings open and shut on those hinges. All the weight of the door rests on those hinges. But when people see a pivot door for the first time, it blows their minds a little bit.

PIVOTAL

STUNNING
DESIGN

The door doesn't have to open from the very end of one side. They're typically offset, which means the pivot point is actually a few cm in from the door frame, allowing the door to quite literally pivot open. However, what truly ensures they stand out from the crowd is their impressive size!

PIVOTAL

EXTRAORDINARY
SIZES

They are significantly larger than traditional doors. This is because the weight of a pivot door is distributed to a central pivot point. Thus, the weight limitation of the traditional system is eliminated. A front entrance with a large size pivot door , would create a bold statement for the structure.

PIVOTAL

PERFECTLY
BALANCED

Regardless of where the hinge is placed, all of our custom built, luxurious pivot doors are perfectly balanced. The door needs only a little force to start moving, then it continues to rotate by itself, thanks to the patented spring construction.

pivotal

SUPERIOR
SECURITY

With its impact resistance, strong hinges and superior locking systems, you do not need to compromise on elegance and security in pivot doors.

PIVOTAL

EASY
ASSEMBLY

Pivot doors are also easier to install than traditional doors. The pivots hinges contribute to the simple nature of the design. Therefore, installation basically consists of installing the floor and ceiling slab and then lifting the door into place.
